EDUCATION

PhD in Information Technology Research
Universidade de Santiago de Compostela
2020 – 2025

MSc in Bioinformatics and Biostatistics
Universitat Oberta de Catalunya
2019 – 2020

BSc in Computer Engineering
Universidade de Santiago de Compostela
2015 – 2019

PROGRAMMING

Python · R · Bash · SQL

SEQUENCING

QIIME 2 · DADA2 · BLAST · Illumina

R AND STATISTICS

phyloseq · vegan · ggplot2 · R Markdown · mixed models · differential abundance

PYTHON AND ML

pandas · NumPy · Biopython · scikit-learn · matplotlib · ensemble learning · feature selection

ENVIRONMENTS

Linux · HPC/SLURM · conda · Docker · Git · GitHub · GitLab

CURRENTLY LEARNING

Nextflow
Courses: Hello Nextflow and Nextflow Run (Seqera, 2026)

Profile

Bioinformatician with a PhD in Information Technology Research (USC, 2025), an MSc in Bioinformatics and Biostatistics and a degree in Computer Engineering. I work on NGS data analysis, mainly 16S rRNA amplicon sequencing and clinical metagenomics, building end-to-end analyses (quality control, preprocessing, statistical analysis and reporting) in Python, R and Bash on Linux and HPC environments with SLURM. I have developed open-source bioinformatics tools and applied machine learning to microbiome data. Six scientific publications, three as first author in Q1 journals.

Experience

Collaborating Researcher — Sep 2026 – Present
Universidade de Santiago de Compostela — Santiago de Compostela

- Processing of 16S rRNA amplicon sequencing data (V3-V4, Illumina paired-end) from clinical oral microbiome studies, combining several sequencing runs: quality control, primer trimming (cutadapt), per-run DADA2 denoising, taxonomic assignment (VSEARCH), contaminant removal with negative controls (decontam) and phylogeny (MAFFT, FastTree) in QIIME 2, with version-controlled scripts.
- Statistical analysis in R (phyloseq, vegan, ANCOM-BC2, glmmTMB): alpha and beta diversity, PERMANOVA, differential abundance and mixed models for paired designs.
- Methods and results reports (R Markdown and LaTeX) and documented deliverables for clinical research teams.

AI Research Technician — Jun 2025 – Jun 2026
CESGA, Galicia Supercomputing Center — Santiago de Compostela

- Developed AIRA16S during a research stay at CiTIUS (USC): a Python pipeline for the automated inventory of human 16S rRNA sequencing projects in public databases (NCBI SRA, BioProject, PubMed, Europe PMC), with LLM-based metadata extraction run on an HPC cluster, semantic validation and an interactive results viewer.
- OneHealth DataSpace project (NextGenerationEU), following Scrum: first version of the project website (Next.js, TypeScript, Git) and support for the deployment of the data space platform.

Predoctoral Researcher — Oct 2020 – May 2025
USC, CiTIUS · Xunta de Galicia grant ED481A-2021 — Santiago de Compostela

- PhD thesis (BIOMETA) on bioinformatics procedures for microbiome analysis through 16S rRNA sequencing, applied to the oral microbiome, with model training and execution on an HPC cluster via SLURM.
- Developed three open-source tools, version-controlled with Git and published on GitLab, each with a first-author Q1 publication: PrimerEvalPy, 16SGOSeq and EPheClass.
- International research stay at HEIG-VD, Switzerland (2022), where I developed the first version of EPheClass.

Software Developer — Mar 2019 – Sep 2020
Altia — Santiago de Compostela
Software development in an industry environment, first as an intern.

Software

- **PrimerEvalPy**: *in silico* evaluation of primers and primer pairs against sequence databases, with coverage metrics at each taxonomic level. [GitLab]
- **16SGOSeq**: curated database of 16S rRNA genes and their variants in complete genomes of oral bacteria and archaea, with taxonomy from domain to strain. [GitLab]

PROFILES

laramariavazquezgonzalez
github.com/laravg
gitlab.citius.gal/lara.vazquez
0000-0002-0122-5266
Google Scholar

- **EPheClass**: phenotype classification from 16S rRNA count tables with a dynamic ensemble of machine learning models (kNN, Random Forest, SVM, XGBoost, MLP); ROC AUC 0.974. [GitLab]
- **Oral16SAmpliconSimilarity**: *in silico* analysis of 16S rRNA amplicon similarity across oral prokaryotic genomes, to identify which species become indistinguishable depending on the primer pair used. [GitLab]
- **AIRA16S**: automated inventory of human 16S rRNA sequencing projects in public databases, with LLM-based metadata extraction and semantic validation, integrated into a health data space.
